NEW Courses on SOLAR

Mac OS X Security (ITS-001-04)
This course was developed as a joint effort between the Information Technology Security Awareness and Training Center and a few members of the NASA Mac Working Group. This is our second operating system course that contains information written specifically for users with administrative privileges in addition to information for the system administrators. It has been designed to help users with heightened privileges keep their systems secure, and to help system administrators more effectively manage the security of their Mac OS X-based workstations or servers. This course was developed for version 10.2.6 of the Macintosh operating system. Enhancements related to security that are part of version 10.3, released in October of 2003, will be noted.

Understanding Full Cost (FM-001-04)
This training tool will provide you with some basic information about our move to Full Cost. We will use a
